## 1. Download the Dataset

<https://www.kaggle.com/code/kredy10/simple-lstm-for-text-classification/data>

## 2. Import the required libraries

```
import os import re
import pandas as pd
import numpy as np
import nltk
from nltk.corpus import stopwords from
nltk.stem import WordNetLemmatizer from
wordcloud import WordCloud import
matplotlib.pyplot as plt import
tensorflow as tf
from tensorflow.keras.models import Sequential from
tensorflow.keras.layers import Dense, LSTM, Dropout, Embedding from
tensorflow.keras.callbacks import EarlyStopping from
tensorflow.keras.preprocessing.text import Tokenizer import keras
from sklearn.preprocessing import LabelEncoder from
sklearn.feature_extraction.text import TfidfVectorizer from
sklearn.model_selection import train_test_split from
google.colab import drive
```

```
#Mount and access drive
drive.mount('/content/drive', force_remount=True)
os.chdir('/content/drive/My Drive')
print("Change successful.")
```

Mounted at /content/drive Change  
successful.

## 3. Read the dataset and do pre-processing

```
